Project Description: The site was a gasoline station but has been vacant since 1987. Six underground storage tanks were removed from the site in February 1996. Total Petroleum Hydrocarbons were detected during the tank closures up to 9100 ppm.

The contaminated soils at the tank sites were excavated and disposed of properly off-site. Confirmatory samples collected after the excavation indicated that all volatile organic compounds and polynuclear aromatics were below Tier II Nonresidential cleanup objectives.
